Wind turbine generator system power performance test report for the Entegrity EW50 wind turbine

By -

No binding. Book Condition: New. This item is printed on demand. Original publisher: Golden, CO : National Renewable Energy Laboratory, 2011 OCLC Number: (OCoLC)733057073 Subject: Wind turbines -- Testing. Excerpt: . . . The EW50 was connected to the electrical grid at a nominal voltage of 480 VAC at a frequency of 60 Hz. The grid tolerances are 5 for voltage amplitude and 1 for frequency. 4. Description of Test Equipment All test equipment was calibrated; Appendix B contains the calibration sheets. Table 4 shows the equipment used and calibration due dates. Figure 4 depicts the placement of the meteorological instruments on the tower. The primary anemometer was sent out for recalibration after the test period. The difference between the pre-test and post-test calibrations is less than 0. 04m s for the range of 6 to 12m s, and this is within the tolerances allowed by the Standard (0. 1m s). Table 4. Equipment used in the power performance test Instrument Make and Model Serial Number Calibration Due Date Power transducer Ohio Semitronics, DMT 1040E 07070473 12 Feb 10 001293045 Calibrated with power Current transformers Ohio Semitronics, 12974 001235428 transducer 001293049 Primary anemometer Thies, First Class 0707884 25...

Reviews

The publication is great and fantastic. It can be filled with knowledge and wisdom You wont truly feel monotony at at any moment of your time (that's what catalogues are for about if you ask me).

-- **Dr. Marcos Grimes III**

This is the best book i have read until now. It can be filled with knowledge and wisdom Once you begin to read the book, it is extremely difficult to leave it before concluding.
