## ANATOMY AND PHYSIOLOGY FOR NURSES

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 edition. Excerpt: .the secretory cell of the liver selects substances from which it can elaborate bile and glycogen; the muscle-fiber assimilates those that will promote the changes upon which the power of contractility depends. We know that the proteid compounds contain the most essential elements for the formation of all forms of tissue, and that phosphate of lime is a necessary factor in the hardening of bone, but we are utterly ignorant of the process by which each tissue element is enabled to select the particular substance it needs and to reject that which it does not require. Metabolism.--Our bodies are masses of changing atoms, some of which, we may say, are on the up grade, to construct the various tissues, and some on the down grade, to form the waste matters that are the final products of the tissues activity. These changes, which are going on incessantly while life lasts, are described under the general term metabolism; the constructive changes are termed anabolic; the destructive, hatabolic. The final products, then, of the metabolism of the body will be certain waste-matters; we shall now proceed to describe the mechanism of the organs by means of which these waste-products are eliminated from the body. The Elimination of Waste-products.--In passing through the blood and tissues of the body the proteids, fats, and carbohydrates are transformed into urea, or some allied product, carbonic acid, and water, the nitrogen of the urea being supplied by the proteids alone. Many of...
