Springer. Hardcover. Book Condition: New. Hardcover. 442 pages. Dimensions: 9.4in. x 6.1in. x 1.3in. In the last few years, a stimulating idea is fast emerging in the wireless scenario: the pervasive presence around us of a variety of things or objects, such as RFID, sensors, actuators, mobile phones, which, through unique addressing schemes, are able to interact with each other and cooperate with their neighboring smart components to reach common goals. This novel paradigm, named The Internet of Things (IoT) continues on the path set by the concept of smart environments and paves the way to the development of numerous applications with a significant impact on many fields of future every-day life. In this context, logistics, Intelligent Transportation Systems (ITS), business process management, assisted living, and e-health are only a few examples of possible application fields in which this novel paradigm will play a leading role in the next future. Actually, many challenging issues still need to be addressed and both technological and social nodes untied before the IoT idea being widely accepted. Central issues are making a full interoperability of such devices possible, enabling their adaptation and autonomous behavior, as well as guaranteeing trust, privacy, and security. Also, the IoT idea poses several new problems concerning the networking aspects. In fact, the things composing the IoT will be characterized by low resources in terms of both computation and energy capacity. Accordingly, the proposed solutions need to pay special attention to resource efficiency besides the obvious scalability problems. The papers included in this volume present a picture of the current state of the art on the above issues; more specifically, concepts and ideas are discussed on networking, middleware, security and privacy, RFID and sensor networks, as well as electromagnetic aspects. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Hardcover.
