Excerpt: . . . point except P there passes one other integral curve, and it is tangent to T; while an infinite number of integral curves may pass through P no one of which is tangent to T. Or T may be a cusp locus, so that through every point except P there passes one integral curve, and it has a cusp at this point; while an infinite number of integral curves may pass through P no one of which has a cusp at P. In this case it may happen also that for any point except P the integral curve is not tangent to T, while at P every one of an infinite number is tangent to P. 6. Klein has considered the problem of determining the two parameters of the differential equation of  $L_a$  in 6 in such a manner that the equation furnishes two solutions,...
