

Closed Loop Space Propulsion New Faster Approach: The Next Step in Space Travel

Filesize: 8.61 MB

Reviews

It is fantastic and great. It usually will not charge an excessive amount of. Once you begin to read the book, it is extremely difficult to leave it before concluding.

John F. Roach, United States, 2011. Paperback. Book Condition: New. 230 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.This original book discloses a new and much faster slip through the cracks approach to outer space propulsion. By using fluid drive propulsion this new self-enclosed engine is a revolutionary form of micro-gravity propulsion which electromagnetically accelerates a liquid metal through a geometric structure at high speed, thus creating a dynamic inertial force propulsion. This closed system is far superior to current systems, surpasses plasma and ion. The system produces a constant acceleration using inertial forced propulsion. The geometric structure allows cancellation of unwanted forces which causes a closed system force that is futuristic in nature. The engine requires only electricity, no mass is expelled from the closed system. Since the device requires only electricity, such as a solar satellite panel, an extremely long lifetime can be achieved. Many applications are possible, such as efficient manned travel to Mars, interstellar probes and more. Shows the complete theory of a practical device and explains why an inertial force is necessary for extremely high velocities (near light in a short time).
