Reviews

This is actually the finest ebook i have got study till now. I actually have go through and that i am sure that i am going to likely to read once again once again later on. Its been developed in an extremely straightforward way and is particularly simply soon after i finished reading through this ebook through which actually modified me, change the way i really believe.

PHOTOREALISTIC VISUALIZATION TECHNIQUES FOR USING SPATIAL AUGMENTED REALITY IN THE DESIGN PROCESS

Shaker Verlag Apr 2012, 2012. Buch. Condition: Neu. Neuware - The automotive industry uses virtual content and corresponding real objects for designing, developing and assessing new components of a car. It is also possible to use projectors to display the virtual content directly on the real object. This technique is called spatial augmented reality and is especially interesting for the design process, because in contrast to a visualization with traditional virtual reality techniques the designer has a more realistic impression of the virtual content. Since many different virtual contents can be projected onto the shape of one basic real object, this procedure can significantly reduce the number of design iterations as well as the overall design time. If spatial augmented reality is used in the design process, it is important that the virtual content is projected onto the real object with a very high visual quality, because design decisions are made based on this projection. It is especially important that the visualized colors on the real object are not distinguishable from corresponding real reference colors and the virtual content lies on the correct positions on the real object. In this thesis, new approaches for the augmentation of real objects are presented which are able to match these requirements and are also applicable to other industrial areas. A new method is presented for evaluating the overlay accuracy achieved by current and extended geometric registration techniques. To account for the visual requirements, a new rendering method with ray tracing is presented which increases the visual quality of the projected images in comparison to existing methods. The desired colors of these images have further to be adjusted to compensate for the material, the ambient light and the projector pose. For this purpose, a physically-based computation is developed which exactly determines the corresponding RGB...
