*This book will never be straightforward to start on looking at but extremely exciting to read. I actually have read through and that i am sure that i am going to gonna go through once more again in the future. I am happy to explain how this is the very best book i have read through in my individual lifestyle and may be he best publication for at any time.*

## MATHEMATICAL MODELING OF UNSTEADY FLOW

Condition: New. Publisher/Verlag: Noor Publishing | For AL- Kahlaa Regulator River | The study of the river flow predictions in open channels is an important issue in hydrology and hydraulics . Consequently, this paper is concerned with studying the unsteady flow that may exist in open channel , and its mathematically governed by the Saint Venant equation using a four-point implicit finite difference scheme. From many hydrologic software, HEC-RAS (Hydrologic Engineering Center - River Analysis System) is a good choice to develop the hydraulic model of a given river system in the south of Iraq represented by Al- Kahlaa River by a network of main channel and three reach and a total of 57 cross sections with 3 boundary sections for one of the applications . The model was calibrated by using the observed weekly stage and flow data . The results show that a good agreement was achieved between the model predicted and the observed data by using the values Manning&apos;s( $n=0.04$ ) for over bank with the values of Manning&apos;s (  $n=0.027$ ) for main channel and also with using time weighting factor (  $t_h$  ) equal one . | Format: Paperback | Language/Sprache: english | 148 pp.
