

## Representing Attitudes as Intervals - A Reformulation of Coombs Theory of Unidimensional Unfolding

Filesize: 5.67 MB

### ***Reviews***

*Very beneficial for all type of individuals. I have got study and so i am certain that i am going to going to read through once again once again later on. I am just happy to let you know that this is basically the greatest publication i have study during my own daily life and could be he finest pdf for ever.*

## REPRESENTING ATTITUDES AS INTERVALS - A REFORMULATION OF COOMBS THEORY OF UNIDIMENSIONAL UNFOLDING

[DOWNLOAD PDF](#)

VDM Verlag. Paperback. Book Condition: New. Paperback. 284 pages. Dimensions: 9.6in. x 6.7in. x 0.6in. Attempts at measuring attitudes abound. Yet the standard representation of attitudes as points on a single dimension is inadequate for representing relationships of favourability and of implication between attitude statements. This book explores an alternative representation; attitudes are represented as intervals and parameterized according to their midpoint and latitude. The midpoint can be understood as the favourability of the attitude, while the latitude can be understood as its generality or latitude of acceptance. Coombs Theory of Unidimensional Unfolding is reformulated using this representation and 18 possible distance measures are examined, including the Minkowski  $r$ -metric and the Generalised Hyperbolic Cosine Model (GHCM). These measures are subjected to two empirical tests, the triangle inequality test, and the aligned stimuli test. The results suggest that the triangle inequality fails, so the judgement space is not metric. Furthermore, only the GHCM (item) satisfied both tests and only if the operational function is strictly log-convex. This suggests that the latitude of acceptance is an item parameter. This book is aimed at researchers in social science. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
