

Photonic Crystals for Supercontinuum Generation- A White Light Source

Filesize: 5.83 MB

Reviews

This publication will not be easy to get going on reading but really exciting to read through. it was writtern really perfectly and beneficial. I found out this pdf from my i and dad suggested this publication to find out.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | It's application in Optical Coherence Tomography | Photonic Crystal Fibers (PCF) form a new class of Optical fibers, which has attracted tremendous interest in the last few years. PCF s are typically silica fibers having a large number of air holes located in the cladding region. The strong wavelength dependency of the effective refractive index and the inherently large design flexibility of the PCF s allow for a whole new range of novel properties. Such properties include endlessly single-moded fibers, extremely nonlinear fibers and fibers with anomalous dispersion in the visible wavelength region. Supercontinuum generation is a process where laser light is converted to light with a very broad spectral bandwidth (i.e., low temporal coherence),whereas the spatial coherence usually remains high. The spectral broadening is usually accomplished by propagating optical pulses through a strongly nonlinear Photonic Crystal Fiber. | Format: Paperback | Language/Sprache: english | 108 pp.
