

Beginning Google Web Toolkit: From Novice to Professional

By Bram Smeets

Apress. Paperback. Condition: New. 350 pages. Dimensions: 9.1in. x 6.9in. x 0.7in. The open source, lightweight Google Web Toolkit (GWT) is a framework that allows Java developers to build rich Internet applications (RIAs), more recently called Ajax applications, in Java. Typically, writing these applications requires a lot of JavaScript development. However, Java and JavaScript are very distinctively different languages (although the name suggests otherwise), therefore requiring a different development process. In *Beginning Google Web Toolkit: From Novice to Professional*, you'll learn to build rich, userfriendly web applications using a popular Javabased Ajax web framework, the Google Web Toolkit. The authors will guide you through the complete development of a GWT front-end application with a nononsense, downtoearth approach. You'll start with the first steps of working with GWT and learn to understand the concepts and consequences of building this kind of application. During the course of the book, all the key aspects of GWT are tackled pragmatically, as you're using them to build a realworld sample application. Unlike many other books, the inner workings of GWT and other unnecessary details are shelved, so you can focus on the stuff that really matters when developing GWT applications. What you'll learn Get a solid...
