THE MESSENGER OF MATHEMATICS

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: .by the six quantities $du, dv, d\omega, dx, -df, du, (dw, dv, (du, dw, (dv, du$ and a motion of rotation, whose components are. $(d\omega, dv, (du, dw, (dv, du, .$ where u, v, w denote as usual the component velocities of P . The symbols a, b, c denote the rates of elongation parallel to the axes, whilst f, g, h measure the shearing motions parallel to the three coordinate planes. If the axes of x, y, z be taken coincident with the principal axes of a fluid element having its centre of inertia at P , the component angular momenta of this element relative to these axes will be $hI-Af-(B-C)ft, h, -Bn-(0-A)g,) (3), ht-CS-(A-B)h$, where A, B, C denote the principal moments of inertia of the element. For, if m be any particle of the element, $A_j = 2m \text{ ioy--vz}-ZA+f(C-B)$. Let us now fix our attention on the portion of fluid which is, at time t , enclosed by a small spherical surface having the point P as centre. This is acted on by two sets of forces: first the pressures of the surrounding fluid, and, secondly, the external impressed forces. The former have zero moment about any axis through P ; and it is easily proved that the same is true of the external forces (at least as far as the order of magnitude with which we are concerned), provided these have a potential. Hence, at time t , the rate of change of the angular momentum...
