

## Design and Analyze Control Systems Using MATLAB (Paperback)

Filesize: 9.61 MB

### **Reviews**

*Comprehensive information! Its this type of very good read. It is written in basic words instead of hard to understand. You are going to like how the article writer compose this pdf.*

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Control System Toolbox provides algorithms and apps for systematically analyzing, designing, and tuning linear control systems. You can specify your system as a transfer function, state-space, zero-pole-gain, or frequency-response model. Apps and functions, such as step response plot and Bode plot, let you analyze and visualize system behavior in the time and frequency domains. You can tune compensator parameters using interactive techniques such as Bode loop shaping and the root locus method. The toolbox automatically tunes both SISO and MIMO compensators, including PID controllers. Compensators can include multiple tunable blocks spanning several feedback loops. You can tune gain-scheduled controllers and specify multiple tuning objectives, such as reference tracking, disturbance rejection, and stability margins. You can validate your design by verifying rise time, overshoot, settling time, gain and phase margins, and other requirements. The more important Control System Toolbox features are the next: -Transfer-function, state-space, zero-pole-gain, and frequency-response models of linear systems -Step response, Nyquist plot, and other time-domain and frequency-domain tools for analyzing stability and performance -Automatic tuning of PID, gain-scheduled, and arbitrary SISO and MIMO control systems -Root locus, Bode diagrams, LQR, LQG, and other classical and state-space design techniques -Model representation conversion, continuous-time model discretization, and low-order approximation of high-order systems.
