Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from **A Fatigue Model for Fiber-Reinforced Polymeric Composites for Offshore Applications** Over the last three decades, fiber-reinforced polymer (f rp) composites have been used extensively in a wide range of aerospace and military applications. There is a growing interest in extending the use of these materials into civil engineering structures such as offshore platforms An urgent need exists to develop quantitative analysis and methodology for assessing the safety and reliability of using polymer composites in these applications. One particularly critical issue in regard to using polymer composites in structural applications is their fatigue reliability in different environments and loading conditions. Fatigue damage in polymer composites for non civil engineering applications has been extensively investigated [3 Studies of the effects of water or salt water on the fatigue behavior of polymer composites have also been widely reported [8 However, there is little quantitative research on the effects of civil engineering environments, namely water, sea water, concrete pore solution, temperature, ultraviolet radiation. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
