Trafford Publishing, 2013. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength, based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.
