L. Multiply together line by line the groups in (95) and (100), add the results, the sum will be cypher; or KG W + mm + nn = 0. (104) Whence we infer that the planes of the impressed and centrifugal couples are always at right angles to each other. LI. If we compare the formula (84) with (100), we shall find the second members identical, if we assume as, in (97), P=f 9=fv r-fl whence G = Tnco2. (105). We may hence infer that the triangle between the radius vector, the tangent plane, and the perpendicular on it from the centre, coincides in position with the plane of the centrifugal couple. The centrifugal couple is also equal to the centrifugal triangle multiplied by the mass and the square of the angular velocity. The reader will not fail to have observed the ease and simplicity with which the properties of the ellipsoid, treated generally, without reference to the principal axes, by the method of tangential coordinates, may be used to illustrate and establish the corresponding states of a body in motion round a fixed point. The subsequent investigations might in most cases have been discussed with the same generality and facility; but..
