Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1833 Excerpt: .bitter. It is a native of the hottest parts of America. Genus Dionea. Fig. 170. Venus Fly. trap (*Dionea muscipula*), is a singular plant, having leaves which catch and retain flies, and other insects, and hence its trivial name. The plant consists of a single stalk, rising in the midst of radical leaves, about eight inches high, and terminated by a corymb of white flowers. The leaves have winged lobes, like those of the Seville Orange. The extreme part of the leaf proper, which is nearly in the form of two oblong circles, is the part that operates as the trap. See the figure. These parts, or lobes, collapse, or fold themselves together, when they are irritated or touched. Hence, when an insect crawls between the lobes, it is entrapped, and detained. Linnaeus says, that when the insect ceases to struggle, the leaf opens and lets it escape. But Ellis says, the Why is Mahogany preferred to all other kinds of wood for cabinet furniture? How did the genus *Quassia* obtain its name? What is the peculiarity of the *Dionea muscipula*? leaf never opens so long as the insect remains there. A sweet liquor which the leaf secretes, tempts the insect to its destruction. This plant is a native of Carolina, and may be cultivated in the green houses of our climate. Genus *Kalmia*. Laurel. Calico bush. The generic name is in honor of Peter Kahn, professor at Abo, in Sweden, and author of Travels...
