Date :2009-07. automatic control engineering design (including graduation) is the use of automation and control engineering courses have learned the production process of a concrete realization of the implementation of automation solutions . Complete automation and control engineering. automatic control is necessary to master the theory and the basic theory of automatic control engineering. but also familiar with automated tools (electric control instruments. sensors and automatic instrumentation. automatic control theory and control systems. automation and installation knowledge map. computer-controlled) and the use of such models. specifications. prices and other information. but also to learn about the professional knowledge of engineering practice. such as engineering design of the general procedures and methods. electrical equipment. instrumentation design and installation of equipment and materials commonly used in the specifications. models and so on. The materials to typical distillation process automation and control design throughout the design of comprehensive training courses will enable students to understand the specialized combination of the knowledge and the importance of integrated applications. As the automation control engineering design practice is strong. practical knowledge and broad and therefore more need for a comprehensive display of skills. This material can be used as petrochemical. chemical. metallurgy. electric power. defense. pharmaceutical. textile and other industries. and engineering design automation technology training reference books. Contents: Project 1 familiar with a variety of typical process control automation and control design task of a distillation column content of the basic structure and control of distillation process design requirements of the basic structure 1.1.1 1.1.2 1.1.3 distillation column control process requirements distillation steps 1.1.4 1.1.5 perturbation analysis distillation process and distillation column control operation target control..
