Excerpt from **I/S Attitudes: Toward Theoretical and Definitional Clarity** However, the successful use of attitudes in information systems research is also dependant upon the development of a convincing theoretical model of the causal chain from systems to value, and of the place of attitudes in that system-to value chain. Thus we need models linking both systems or policies to attitudes, on the one hand, and attitudes to performance or value on the other. Without a strong theoretical base of this type, we will be unable to build a body of empirically supported theory, regardless of the statistical significance of individual results. This paper focuses on the underlying theory supporting user attitude research in mis. Section 2 discusses the theoretical basis of recent mis attitude research. Section 3 develops one approach to the study of VS attitudes by using job satisfaction research as a theoretical basis for understanding the link (or lack thereof) between attitudes and performance. A model distinguishing between attitudes of job satisfaction and ratings of individual fit with job requirements is used as a platform to build a model of VS attitudes, beliefs, and performance. This model suggests that performance is affected by the correspondence or fit between the task requirements and the functionality of the US environment, mediated by the abilities of the individual. Section 4 discusses the implications of this model for future research. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
