Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Application of Variable Speed Drives (VSD), Fuel Switching and Economizers | In 1985 Malaysia has changed from agricultural into industrial based economy. The industrial sector represents the highest consuming sector across all other sectors and accounts for about 48% of total energy demand. This study is concerned with an energy saving, economic and environmental analysis of industrial boilers in Malaysia. There are three principles that have been investigated: Installation of variable speed drive; fuels switching between diesel and other types of fuels such as natural gas and biomass; and installation of heat recovery systems in these boilers. After implementation of VSD, the results obtained when reducing the speed of water pumps by 60% show that 4 GWh, 93.6% of energy, RM 863,375 and 2,160 ton of CO₂ could be saved annually which all represent high energy saving, environmental and economic benefits. Also it has been found that when switching between diesel fuel and biomass gas by a percentage of 50% for both instead of using 100% of diesel fuel, 11,946 ton of CO₂ and RM 1,872,532 could be saved annually. Finally installation of economizer has proven its viability with 2,529,779 KWh energy saving, RM 238,573 bill saving and 2,150 ton of CO₂ per annul. | Format: Paperback | Language/Sprache: english | 181 gr | 124 pp.
