

Small Cold Storages and Dairy Buildings (Classic Reprint) (Paperback)

By J A Ruddick

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Small Cold Storages and Dairy Buildings The mere preservation of a few blocks of ice is a simple matter. Any unoccupied corner of an outbuilding or shed can be utilized. A rough framework of boards enclosing the necessary space and affording protection from the weather is all that is required. About 40 cubic feet should be allowed for every ton of ice to be stored. There should be no floor in this kind of an icehouse. If the soil is light and porous no special provision need be made for drainage. If it is impervious clay it will be better to provide some drainage. The earth should be covered to a depth of 6 to 12 inches with small stone, coarse gravel or cinders. About one foot of sawdust or planing-mill shavings should be placed under the ice. A space of at least one foot should be left between the ice and the walls, to be filled with sawdust or planing-mill shavings, the latter preferred. Cover the ice with one foot of the same material. Reviews

The very best book i actually study. It is actually written in easy terms and never hard to understand. Your daily life period will probably be enhanced when you total looking over this publication.

-- Edna Rolfson

This written pdf is great. It is really simplistic but surprises within the 50 percent of the pdf. I realized this pdf from my dad and i advised this pdf to understand.
