

## Information strategies on self performed Oral hygiene in Children

By Dr. Ravi Sher Singh Toor

LAP Lambert Acad. Publ. Aug 2011, 2011. Taschenbuch. Book Condition: Neu. 220x150x10 mm. This item is printed on demand - Print on Demand Neuware - The aim of the study was to investigate the effects of different patient information modules on self performed oral hygiene methods using manual and powered tooth brushes in a group of school children. The study included 200 (two hundred) school children in the age group of 8-11 years, belonging to same socioeconomic strata and were randomly divided into four main groups: Group I, those who did not attend any program. Group II, those who were supervised by their parents. Group III, those who were supervised by school teachers. Group IV, those who were supervised by Dentists. Each main group would further be divided into two sub groups, (a) Those using manual tooth brushes, (b) Those using powered tooth brushes. The knowledge of dental hygiene and practices was imparted to group II, III, & IV at different intervals through separate education modules. The results were then evaluated using KAP, Plaque index and Gingival Index. The change in KAP, PI and GI helped us to statically adjudge the best information strategy on self performed oral hygiene in school children. 168...
