Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Development and Use of Baking Powder and Baking Chemicals More recently further improvements have been made in the manufacture of monocalcium phosphate. Nearly all manufacturers now use phosphoric acid that has been volatilized from phosphate rock. This acid is practically free of impurities, notably fluorine, which sometimes remained in the acid that was produced by treating the phosphate rock with sulfuric acid. When volatilized phosphoric acid is treated with the calculated amount of purified calcium hydroxide or carbonate, a highly purified monocalcium phosphate results. The speed with which the monocalcium phosphate reacts with bicarbonate of soda is influenced by the conditions under which the phosphate is made. A recent patent (13) describes a process of producing anhydrous monocalcium phosphate. It is claimed that this product reacts slowly in the cold, so that most of the gas is liberated after heat is applied during the baking process. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.](#)
