In this paper, we develop a preliminary model on the determinants of IT outsourcing using a set of firm-level determinants that integrates perspectives from business strategy and corporate finance. Testing the model using data from a sample of 57 major us. Corporations, we empirically demonstrate that poor business performance and high dependence on debt financing lead to a higher degree of IT outsourcing. We conclude with a brief articulation of important directions for future research. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
