Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: . the surface conditions on the test pieces. H. M. Howe: The electrolytic theory of corrosion ought not to be expected to dispense with the need of applying other considerations. The good resistance of cast iron in spite of its heterogeneity need not conflict in the least with that theory, when we remember the enormous advantage which this substance has in being crossed with plates of graphite, which may well form a great obstacle to the progress of corrosion, and thus outweigh the greater heterogeneity. In the same way the sheets of cinder 6 Metallurgist, Mackintosh-Hemphill Co., Pittsburgh. Chemist and Metallurgist, Keystone Steel Wire Co., Peoria, 111. Consulting Metallurgist and Author, Bedford Hills, N. Y. in wrought iron explain readily why that very heterogeneous material resists corrosion so well. This explains readily the Arndt results quoted by the authors on page 193. The greater heterogeneity of the cast iron leads to faster initial corrosion. But as this proceeds the receding surface leaves bare progressively increasing surfaces of graphite sheets, which in themselves resist corrosion strongly. It is as if initially internal surfaces of paint were gradually exposed by the removal of the metal initially overlying them. This principle was elaborated by me in 1900.9 Though I have shown that these apparent flakes of graphite are rather to be regarded as graphite fillings within a very fine skeleton of ferrite, their action in impeding the progress of corrosion is readily understood. The individual threads of ferrite in...
