

Construction Materials, Fifth Edition: Their Nature and Behaviour

Filesize: 8.09 MB

Reviews

Absolutely essential go through pdf. It is written in simple terms and never difficult to understand. I am just very happy to let you know that this is actually the greatest pdf we have gone through in my individual life and might be the greatest pdf for actually.

CRC Press. Paperback. Condition: New. This established textbook provides an understanding of materials behaviour through knowledge of their chemical and physical structure. It covers the main classes of construction materials: metals, concrete, other ceramics (including bricks and masonry), polymers, fibre composites, bituminous materials, timber, and glass. It provides a clear and comprehensive perspective on the whole range of materials used in modern construction, to form a must-have for civil and structural engineering students, and those on courses such as architecture, surveying and construction. It begins with a Fundamentals section followed by a section on each of the major groups of materials. In this new edition: - Typical questions with answers to any numerical examples are given at the end of each section, as well as an instructors manual with further questions and answers. - Coverage of sustainability is markedly increased, to include the drivers for sustainable construction and eco-friendly buildings. - Links are given to free reports from The Concrete Centre, Corus, and others, as well as to material suppliers websites. - The masonry section is entirely overhauled and extended beyond the basics of load bearing masonry, and to include the flexi-arch and hollow core bricks used in mainland Europe for infill walls. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
